

El Paso Spray Parks

CLIENT: City of El Paso

In 2017, Sites Southwest created four spray parks for the City of El Paso. Our design talents were integrated into existing parks in these design-build projects. These well-liked splash pads demonstrated our abilities to assess and select a site, as well as develop a successful project from concept to execution. Splash pad position, theme and color selection, spray form determination, and park facilities were all part of a stunning design that featured careful placement and creative design. Lighting, site amenities, showers, and shade structures were also created by Sites Southwest to match the spray park motif. As a result, four unique locations can be found across El Paso that are appreciated by both children and adults.
