

Convair Road Improvements

CLIENT: El Paso International Airport

Sites Southwest worked closely with EPIA and the project engineers to create a colorful and vibrant corridor for Convair Rd. at the El Paso International Airport with a regional flair day and night. Low water and colorful plants create an iconic image of El Paso for residents and travelers who are coming, going or just passing through.

Sites Southwest created visual 3D simulations to provide cutting edge design visualization that enabled the client to clearly see the end result.

Sites Southwest utilized low-voltage state of the art landscape lighting to EPIA which allows for the landscape lighting to be controlled from a smart phone app or a computer screen simply and quickly. Whether travelers or Sun Bowl players are arriving, lights can be changed in seconds to accommodate the team's colors and then changed back as soon as the next team arrives, even if it is on the next plane.

Improvements include wide walkways, street trees, colorful shrubs, decorative screen walls, low water drip irrigation, low voltage landscape lighting and pedestrian rest areas complete with site furnishings that provide a visually interesting opportunity for a little exercise and/or respite.
